Graphical Abstract. Experimental approach for the multi-omic integrated study of tomato plants subjected to different N availability and treated with Malvaceae-derived biostimulants.

Original Article: Monterisi, S., Alzate Zuluaga, M.Y.A., Senizza, B., Cardarelli, M., Rouphael, Y., Giuseppe, G., Lucini, L., Cesco, S., Pii, Y. (2025). The integrated multi-omics analysis unravels distinct roles of Malvaceae-derived protein hydrolysate and its molecular fraction in modulating tomato resilience under limited nitrogen availability. Plant Stress, 15, art. no. 100771. DOI: 10.1016/j.stress.2025.100771
